

Amil Zeynalli

(774)842-0907 | zeynallia@wit.edu | Boston, MA | linkedin.com/in/amilz | github.com/zeynalliaatwit

EDUCATION

Wentworth Institute of Technology | Boston, MA

Expected Graduation: August 2026

Bachelor of Science in Computer Science

Overall GPA 3.79/4.0

Dean's List (Fall 2024, Spring 2025)

Related Courses: Algorithms, Data Structures, Game Development, Software Engineering, Operating Systems, Database Management Systems, Network Programming, Programming I & II, Systems Programming with C, Introduction to Computation, Computer Architecture and Assembly Language, Probability Theory and Mathematical Statistics

SKILLS

Programming Languages: Java, C, C#, Go, Python, SQL, C++, JavaScript, TypeScript

Software: SQL Server, GitHub, AWS, Docker, Snowflake, Prometheus, Grafana, Postman, React

EXPERIENCE

Tripadvisor | Needham, MA | Software Engineer Intern

September – November 2025

Redesigned Manual Review and Approval Process

- Modernized legacy Bash scripts into best-practice Java applications, migrating critical offline jobs from Tripadvisor datacenter to cloud compute in AWS.
- Designed and implemented a new page in an internal React tool that simplifies and accelerates recurring manual review and approval processes, saving time and improving quality of life for on-call engineers.
- Designed and created a database table to track execution, manual review and approval status of critical offline process.

Additional Technical Contributions

- Improved and optimized React pages for better usability, accessibility, and performance.
- Addressed SecOps vulnerabilities by enabling IMDSv2 in IaC launch templates in CDK.
- Participated in an Agile development environment, code reviews, and contributed to team discussions on project requirements and solutions.

Logic | Waltham, MA | Software Engineer Intern

May 2025 – August 2025

Debug & Visualization Tools

- Developed a real-time debug UI to visualize robot paths, April Tag positions, and robot rotations using live streaming data.
- Optimized robot animation rendering to ensure smooth, accurate playback of position and orientation updates.

End-to-End Feature Development: Exception Handling

- Engineered a full-stack exception logging system, implementing backend models and database queries in Go, and a React, TypeScript frontend interface.
- Developed filtering and management tools within the UI to allow engineers to efficiently track and resolve exceptions.

Tripadvisor | Needham, MA | Software Engineer Intern

June 2024 – August 2024

- Migrated usages from a deprecated legacy filesystem to AWS S3, reducing KTLO and TechOps support costs.
- Implemented pre-signed URLs in Java to allow secure, temporary access to restricted reports for authorized users.
- Implemented UI improvements to an internal tool, adding dynamic status tagging to assist engineers in tracking job execution status.

PROJECTS

Covid Data Tracker | Java (Individual)

October 2023 – December 2023

- Developed COVID data analysis tool using JavaFX for interactive visualization and data manipulation.
- Implemented features for data filtering, sorting, and visualization, enhancing user insights.
- Later redeveloped in Microsoft Visual Studio using C#, WPF
